I have a GCC Ops call at 1230. Can you provide me any intel prior to that time? Especially if it has gone well past the Caribou-Table 230kV. We do know it relayed and is de-energized. Thanks!

12:06 PM

Right now the intel is hard to come by but the fire is making a good push to the north, paralleling the Rim Rd and the River. I will have better intel in about 2 hrs when [redacted] returns so I can go out and field validate- I have to stay at [redacted] for service until [redacted] returns.

1:22 PM

Message has been relayed to [redacted] directly, who said he hasn't issued a press release making that statement, and [redacted] They are tracking that down now

1:25 PM

Ok thanks
